

Pandemic (H1N1) 2009

Update 06 September 2009,
17:00 hours CEST

Main developments in past 24 hours

- No new cases reported in the EU and EFTA countries, remaining a total of 48 269 cases.

This report is based on official information provided by the national public health websites, or through other official communication channels. An update on the number of confirmed cases as of 06 September 2009, 16:00 hours CEST, is presented in Table 1 and Table 2.

Disclaimer: *Several countries have now announced recommendations on treatment on clinical signs only and focused laboratory testing only for specific population groups or in outbreaks. For these countries, the reported numbers of cases presented in this report will severely underestimate the true incidence in the country and will not be comparable to countries still recommending laboratory tests of all suspected influenza cases.*

Epidemiologic update

All 27 EU and 4 EFTA countries are reporting cases of pandemic (H1N1) 2009 influenza. Since April 2009 a total of 48 269 confirmed cases have been reported (Table 1). In the past 24 hours, no new cases were reported from the EU and EFTA countries.

Out of the 121 reported deaths, one new fatal case is reported from Sweden. It should be noted that the fatal case in Norway reported in the Daily Update on 3 September was a Danish citizen. However, in the tables below we continue to assign cases and deaths to the country from which they were reported.

The latest available updates on hospital admissions per Member State are presented in Table 2.

The latest available updates on new and on confirmed fatal Pandemic (H1N1) cases outside of the EU/EFTA area by country are presented in Table 3.
